Notes 4

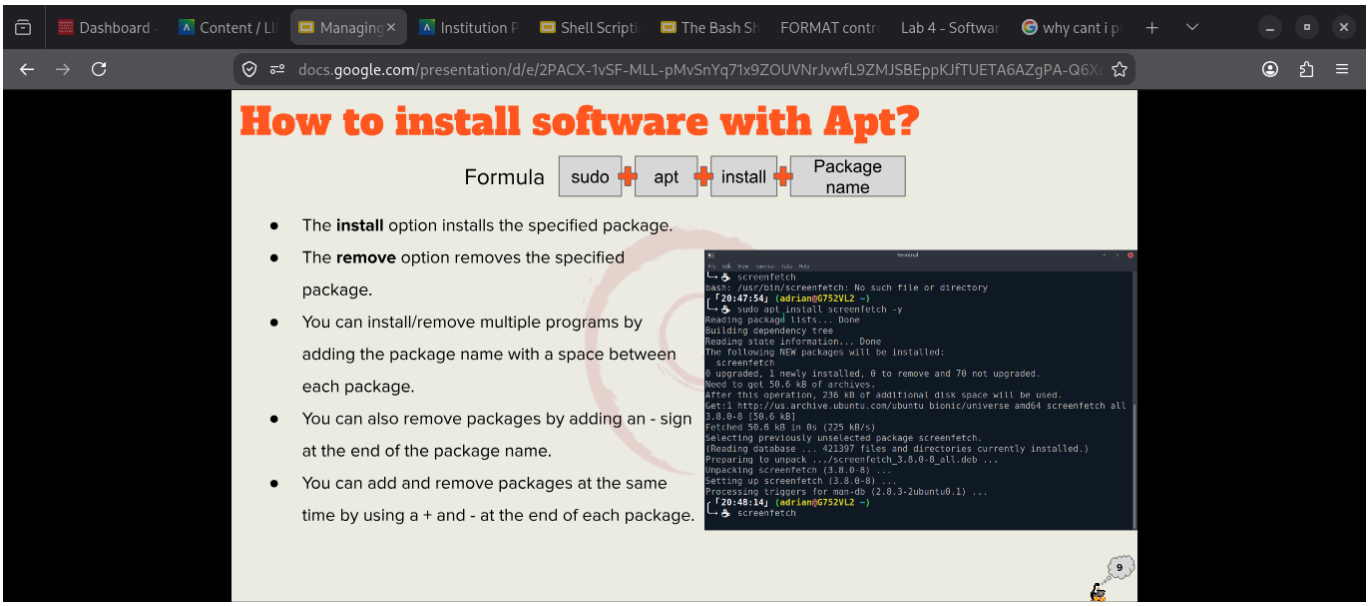

How to install and remove software using the APT command. Include several well documented examples as you will need to install software later.

Step one: open your terminal

Step two:type screen fetch

Step three: type this sudo apt install screenfetch -y

Step four: screen fetch

How to create a shell script step by step including screenshots and how to run it. Try to be as detailed as possible. You will have to create a script in your final exam.

1.Open text editor "the notebook with the pencil icon"

2. Input on the first line `#!/bin/bash`

3.Go to the hamburger & save it as `whateveryouneedtonameit.sh`

Example

`lab4-script3.sh`

4.Open Tilix and type in `bash ~/scripts/lab4-script3.sh`

the whole purpose to input`bash ~/` in then comes the folder you save the text editor at.

5.Text editor is where you input the commands you want such as `echo` and Tilix is where you see the finish product of your work.

6. Do not forget to save the work on the text editor by going to the hamburger and hitting save.

7. On Tilix you can always hit the arrow up on the keyboard to gain the `bash~/` who line with the description and hit enter to always preview the new changes.
